Evidence-based raingarden design to promote community acceptance (A4.1)

Meredith Dobbie & Megan Farrelly

2015

watersensitivecities.org.au

Outline

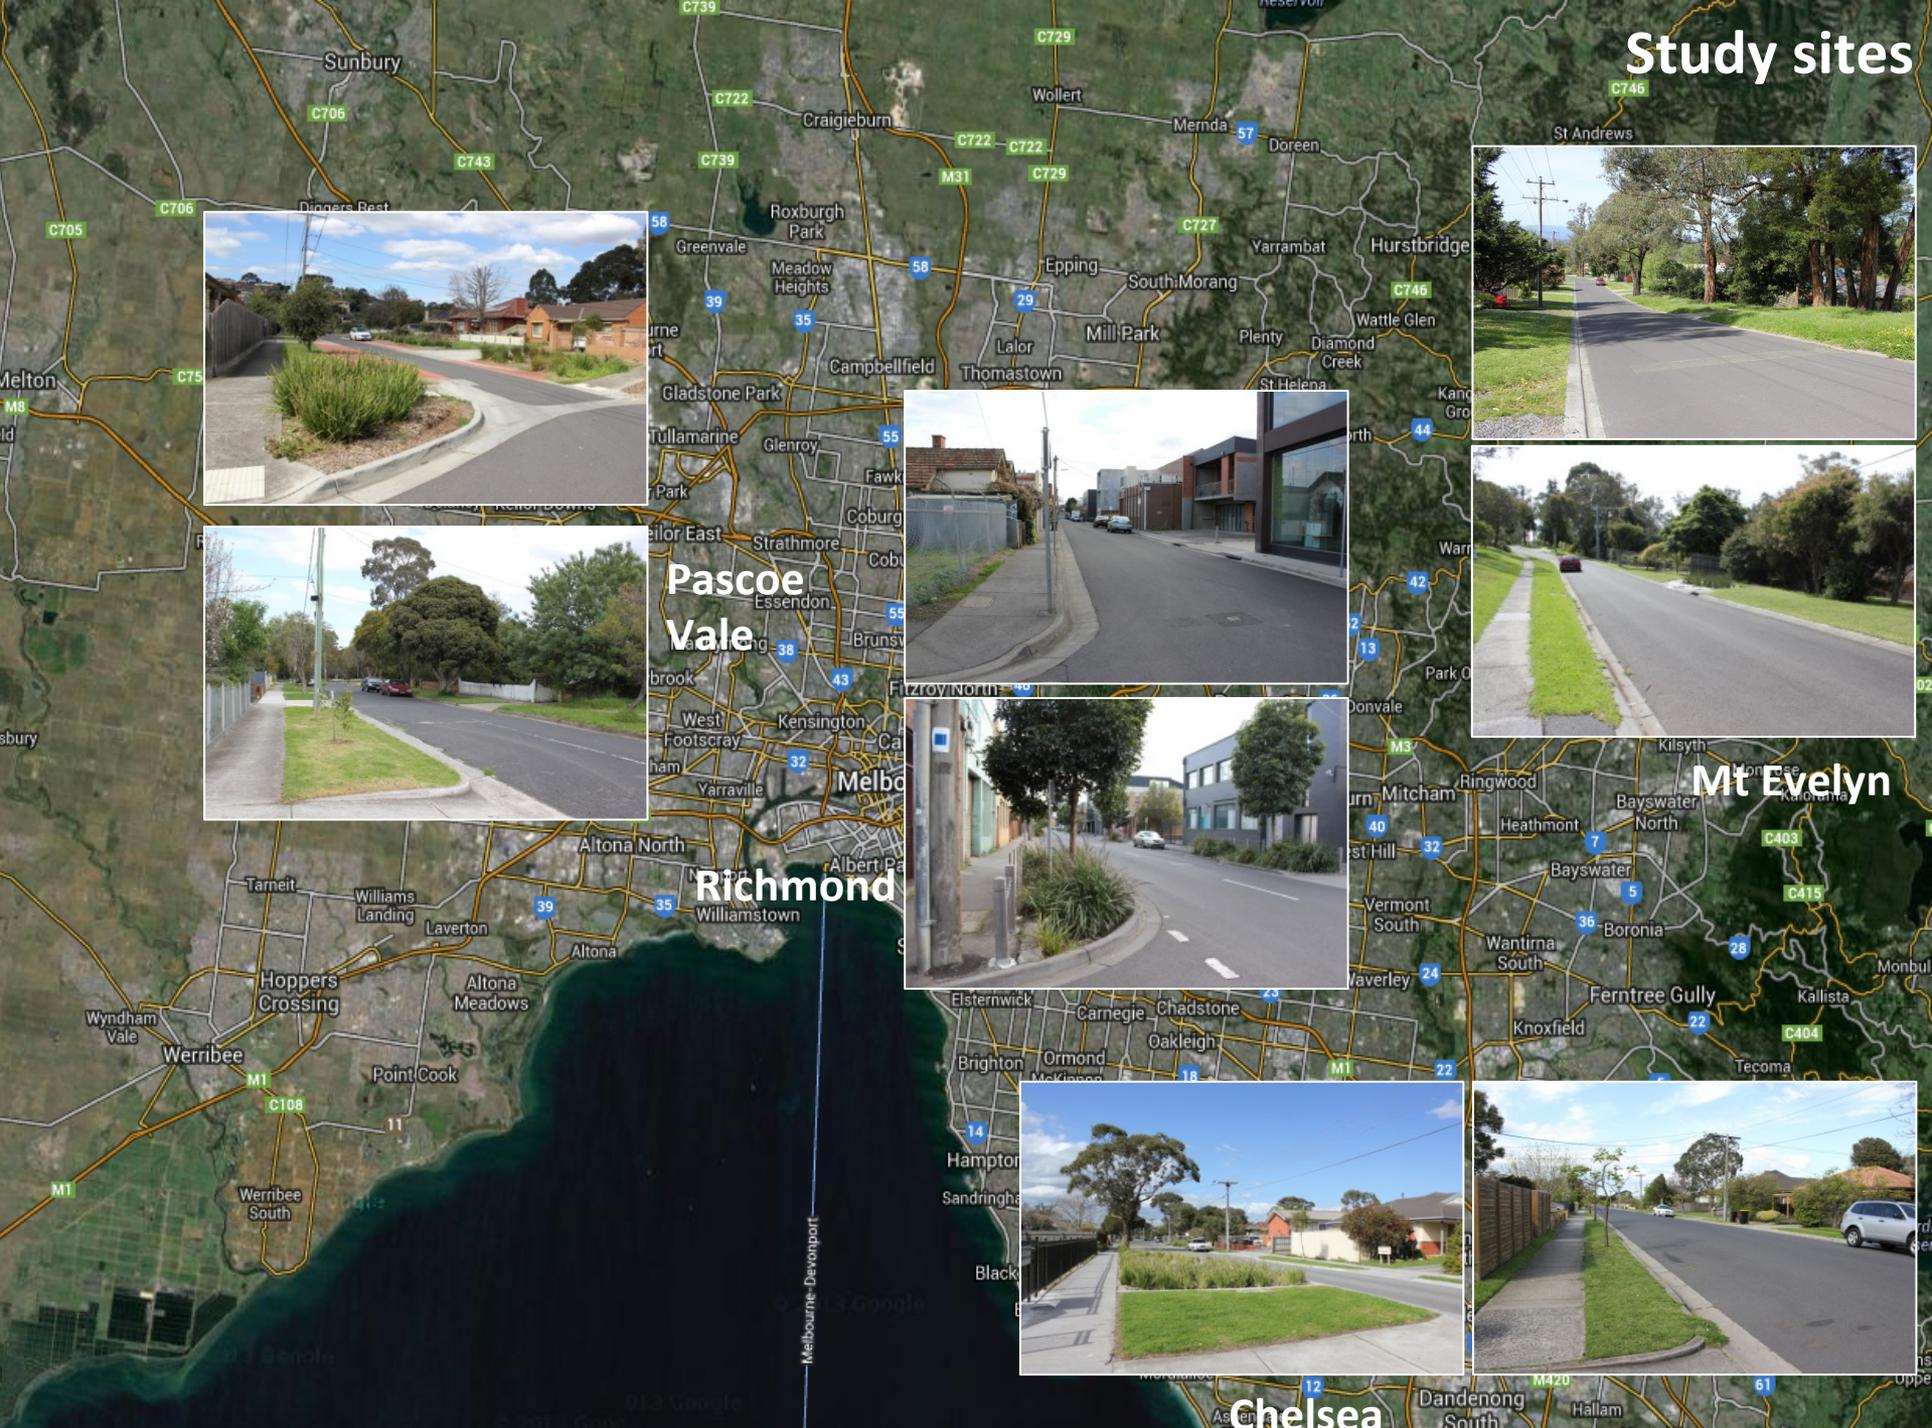

- Study design
- Empirical evidence that can inform design:
 - Community support for use of treated stormwater
 - Preference for streets with raingardens
 - Attitudes of residents to their own streets with raingardens
 - Suggestions to improve appearance of their streets
 - Participation in maintenance of raingardens
- Evidence-based recommendations for design of raingardens

Research Design

- Survey, with 139 participants resident in streets +/- raingardens
- Six pairs of streetscapes, +/- raingardens
 - Four pairs rated with best/worst scaling (streets in which respondents resided)
 - Two pairs rated with Likert scale: influence of knowledge on perception and preference
- Attitudes towards
 - Use of treated stormwater
 - Own streetscape
 - Raingardens in own street
 - Maintenance of raingardens

Study sites

Pascoe Vale

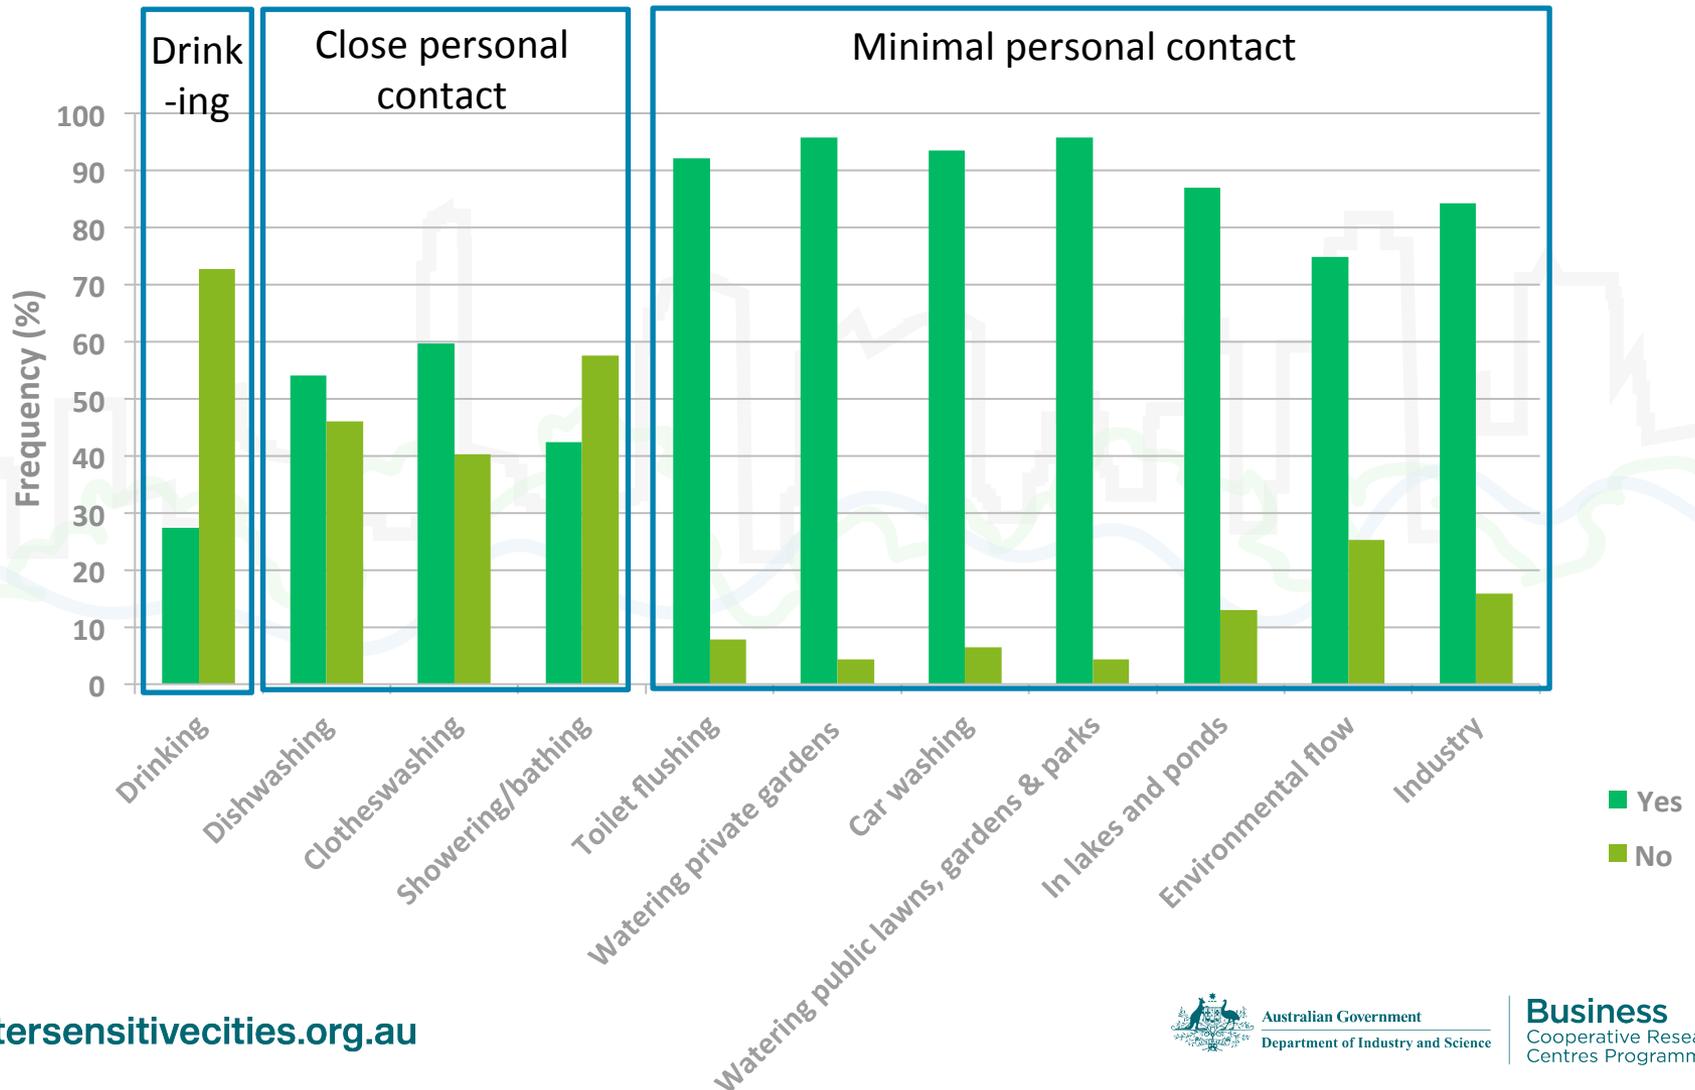

Richmond

Mt Evelyn

Chelsea

Support for different uses of treated stormwater

Aggregated preference for streetscapes with raingardens

Range of scores: -7 to +7

Cremorne St, Richmond, $P = -0.34$ (3.64)

Stawell St, Chelsea, $P = 1.80$ (2.59)

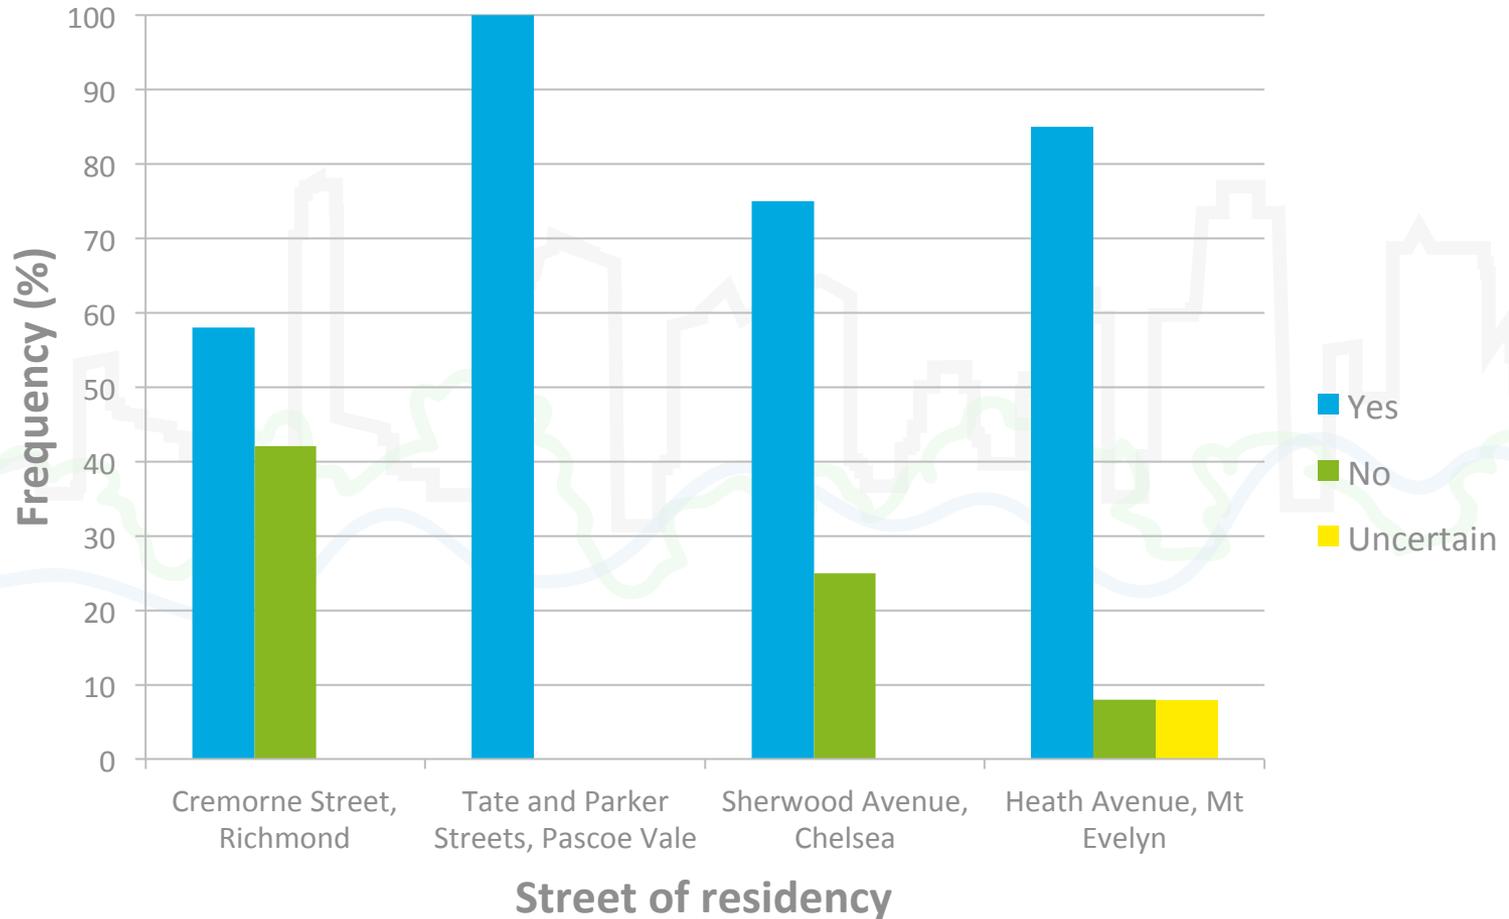

Heath Avenue, Mt Evelyn, $P = 1.91$ (2.96)

Tate/Parker St, Pascoe Vale, $P = 2.14$ (3.28)

“Untidy, (I) don't really (like it)”

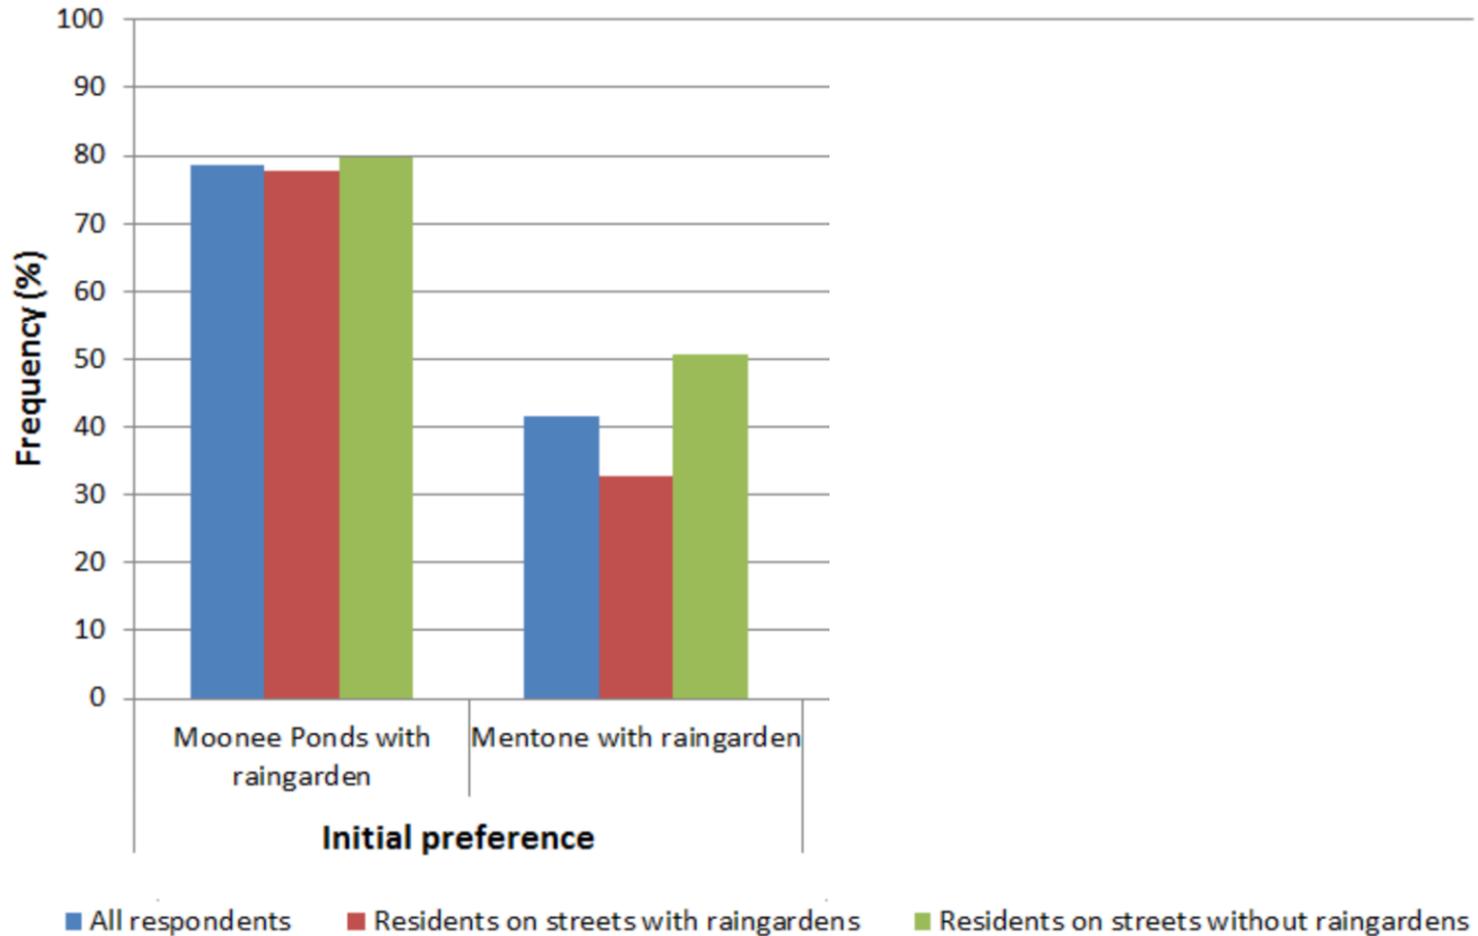

“It looks very functional, mixed commercial, industrial, high-density residential, and a bit cramped. I accept it for the location. I do like the water filtering gardens”

“More greenery. Bigger trees”

“Tidier, garden sections, cleaner building facades”

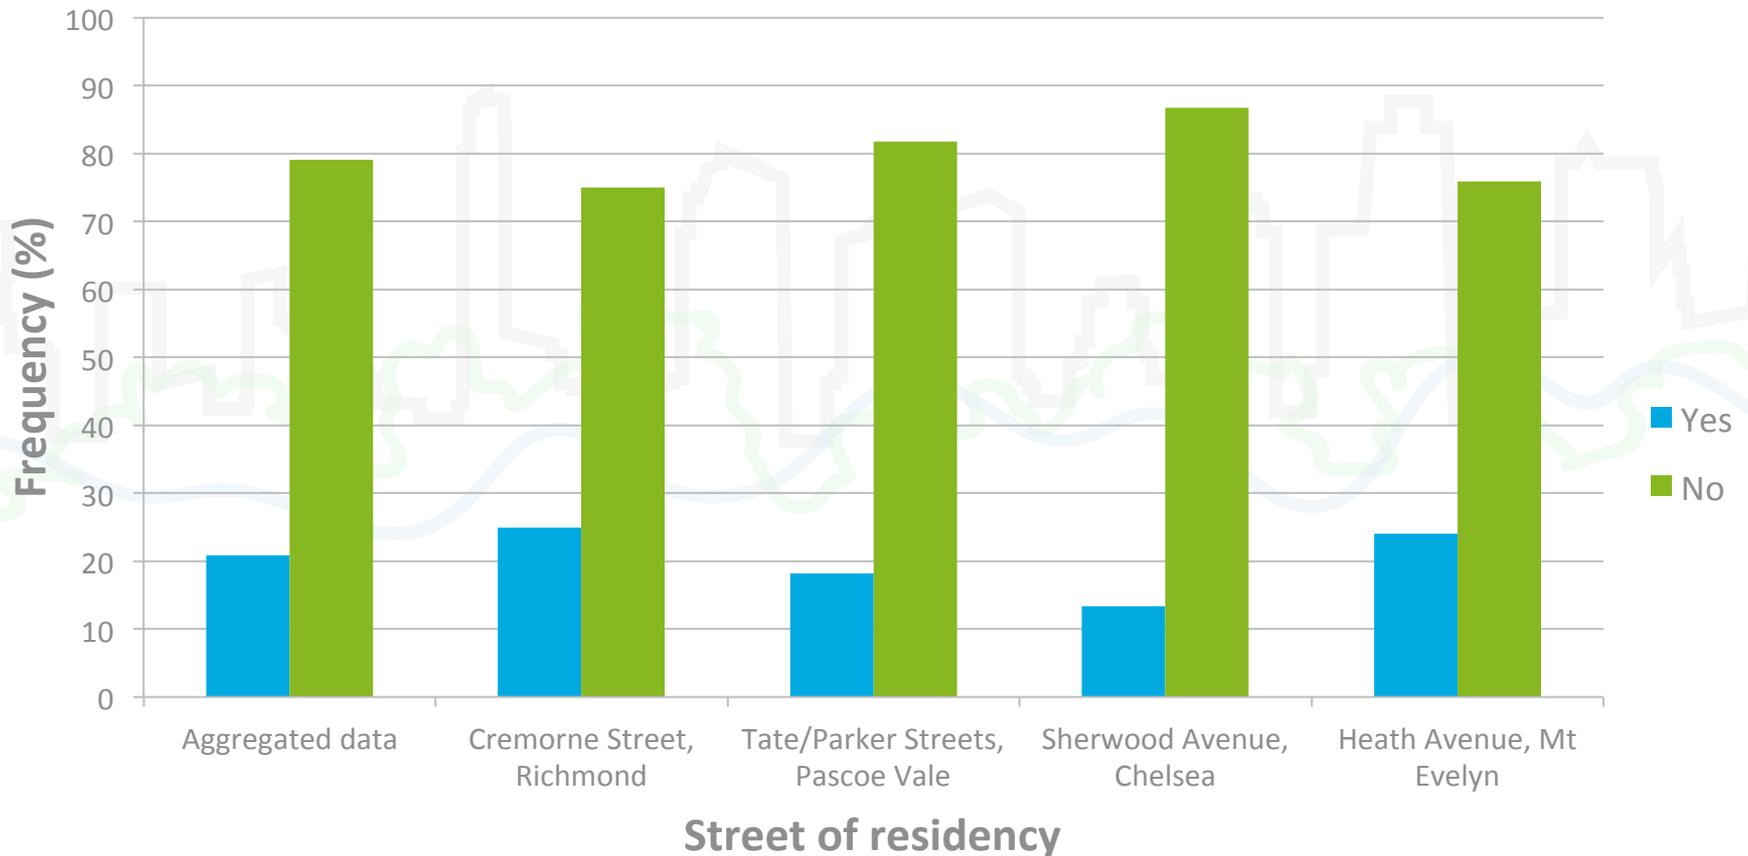

Knowledge and streetscape preference

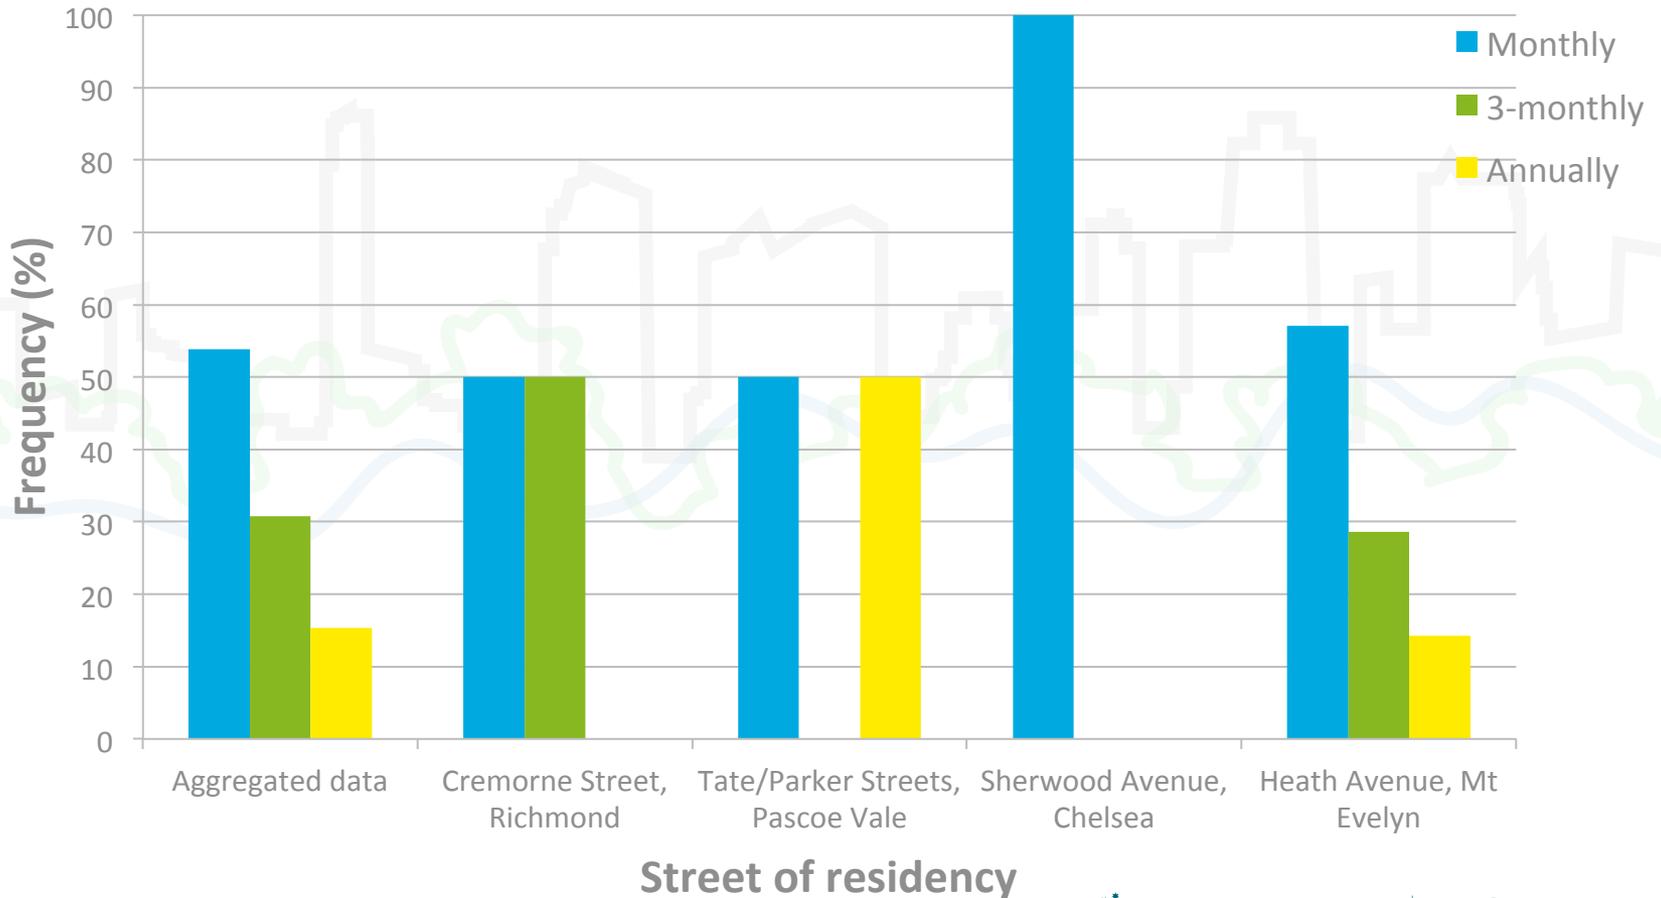

Do residents help to maintain raingardens in own street?

Frequency with which residents help to maintain raingardens in own street

1. *Always design to reflect the local context*

2. Carefully consider placement of raingardens within a street and possible consequences, e.g. loss on on-street parking
3. When selecting plants, consider how area around raingardens might be used
 - i. Wherever possible, include **trees**
 - ii. **Choose plants for aesthetic function** as well as technical function
 - iii. Include plants with colourful flowers or foliage
4. **Provide regular maintenance.** Don't assume that residents will help.....though they might
 - i. Ensure raingardens always look **tidy** and **well cared for**
 - ii. Ensure raingardens always look **green**
5. Provide signage as '**cue to care**' or implement communication strategies to increase knowledge and understanding of the raingardens
